

WHAT IS HOME PERFORMANCE CONTRACTING?

Home performance contracting looks at everything from lighting to insulation, from the boiler in your basement to the air sealing in your attic, to solve everything from moisture problems to energy waste and beyond.

INSULATION

High-performance insulation can save you as much as **20% in heating and cooling costs**, or **up to 30% when combined with air sealing**. This winning combination can lead to improved indoor air quality and a more comfortable home environment.

LIGHTING

New LED bulbs are **90% more efficient** than traditional incandescent lights and **last 25 times longer!** Numerous options in brightness and "warmth" are available.

WINDOWS & DOORS

Replacing old, leaky windows and doors with modern, energy efficient ones can result in **annual savings of up to \$400**.

APPLIANCES

New ENERGY STAR appliances are much more efficient and use less water than those built just 10 years ago.

ENERGY STAR refrigerators are **10% more efficient** than the federal standard for minimum energy efficiency requirements.

ENERGY STAR washing machines utilize **40% less water** than traditional washers, as well as **25% less energy overall**.

ENERGY STAR dishwashers are **10% more energy efficient** than standard units.

HEATING & AIR

More than half of a home's energy budget can be attributed to heating and air. With new high-efficiency HVAC equipment and properly sized duct work that is well-sealed & insulated, you can **reduce this cost by 15% or more**.

Assured Insulation Solutions works diligently to remain current on **all** financial incentives that are offered in our service area.

The incentives range in value from a few hundred dollars to tens of thousands of dollars!
